

# ViPOC

VIRTUAL PROCESS OPTIMIZATION CENTER

## FLEXIBLE

All modules are individually configurable to your strategy and needs.

## AUTOMATED

Automate any Process, Data processing or Procedure as you need.

## COMMUNICATIVE

Open communication in the company through visualized information flow.

## INDEPENDENT

Whether one or multiple locations, ViPOC adapts to your circumstances.

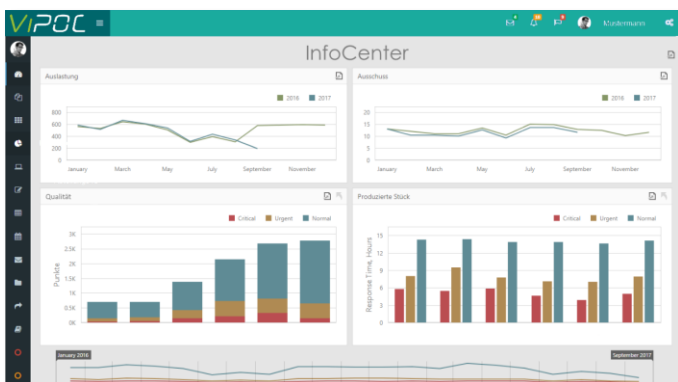

# ViPOC

is a support tool for working with Lean and Shopfloor Management. It is not limited to the representation of processes in the company, but serves as a holistic companion tool for everyday Shopfloor management.

ViPOC starts with dynamically configurable data acquisition, allows fast and efficient editing of acute problems, provides a permanent, visual, digitally-processed flow of information, and covers all the steps, methods and techniques of Shopfloor Management.

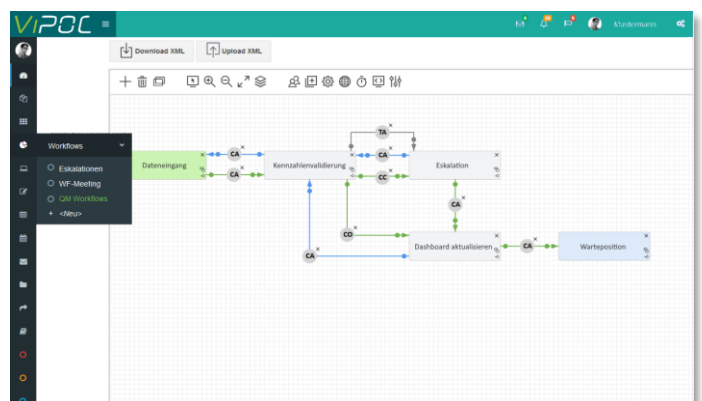

## ON PAPER

Shopfloor management usually takes place on the basis of paper documents. These must be laboriously filled out by hand and further processed. These documents then disappear without being noticed or evaluated again. Even meetings take place in front of huge boards and are barely supported, if at all, digitally.

In-house processes are quickly and easily displayed graphically and supplemented with key figures. As a result, ViPOC offers the possibility of automatically evaluating processes and procedures so that changes can be detected and responded to in real time.

ViPOC can be easily combined with existing ERP and MES systems, or can handle all necessary data processing tasks independently.

## MODULARLY CONSTRUCTED

For optimum use of ViPOC, in terms of SFM, all four modules should be actively used. They are coordinated internally and use each other's data and functions.

Data provision is already often ensured by the use of ERP systems. However, one of the basic principles of SFM is the detachment of such systems. ViPOC offers the possibility of using individual modules, as well as the integration of their existing applications, in the ViPOC process.

The following ViPOC modules support you in your implementation of SFM:

**bM**  
Base Module

*Data collection according to predefined processes and methods*  
*Data processing as desired - whether manual or fully automated (also by external systems)*  
*IT supported implementation of SFM methods*

**iC**  
Information Center

*Visualization of the collected data*  
*Continuous open flow of information*  
*Indirect communication between and at all levels*

**iT**  
Issue Tracker

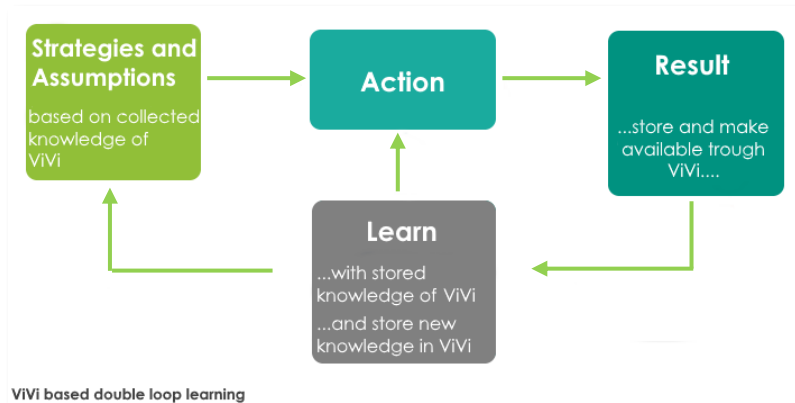

*Manual and automated problem escalation according to set standards*  
*Support for double-loop learning by building a knowledge base*  
*Implementation of specific methods to identify necessary steps in the problem-solving cycle*

**iP**  
Intelligent Processing

*Platform for executives, QM and analysts*  
*Process modeling, monitoring and representation incl. Drill-down*  
*Workflow creation plus connection and monitoring of key figures*

## HELLO VIVI !

A semi-automatic knowledge and processing database known as Vivi runs in the background through the constant processing of data and structured problem solving.

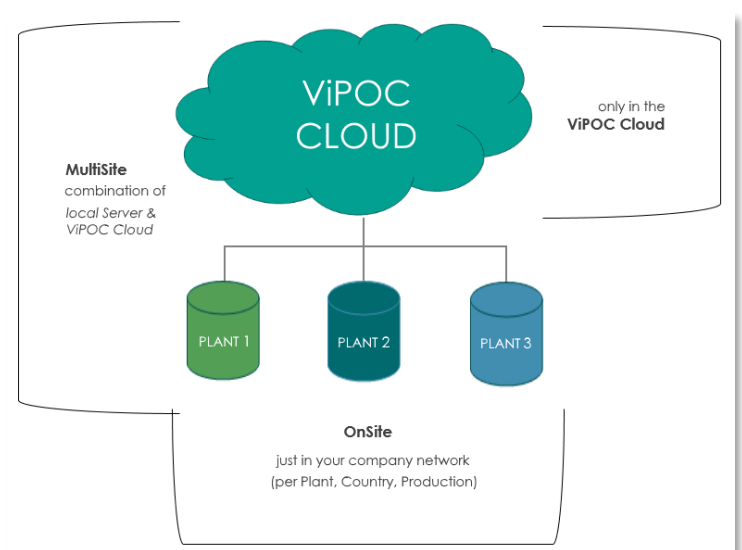

Vivi gets its know-how by clearly marking "Problem & Cause" in the Issue Tracker or the detected solution for problems with metrics in the Intelligent Processing module.

Thus, based on its growth, ViVi can deliver information on newly detected problems and processes in advance. This speeds up both the standardization and the problem-solving cycle.

## SYSTEM INDEPENDENCE

The customer decides if and how ViPOC should be used. ViPOC can be used on site or globally. Thus ViPOC, as a global Shopfloor Management System, allows a location-independent, fast drill-down to manage data and set global standards.

## YOU AND US

Both the many years of experience as an employee directly at the shop floor and the combined experience and specialization in various consulting areas in the field of process, lean and project management, have brought the development of ViPOC to life.

We, as add7, want to inspire and actively support the introduction of shop floor management. With ViPOC we can take a big step in the direction of "modern digital shop floor management".

For more detailed information on Shopfloor Management or ViPOC you can send us an e-mail, or we are of course also available by phone.
